

CS 200 – Sequence Diagram

Team 37: Faizan Khan, Maggie Skinner, Martin Devanathan, Tallon King, Alyssa Duncan

Use Case: Check Out Book

Actor: Librarian

Description: When a borrower wants to check out a book, the librarian scans the bar code on the book and the bar code on the borrower's card, then enters C at the computer terminal. The system looks up the borrower, checks that the book is available, creates a loan, and marks the book as checked out.

Related Classes:

- **LibraryTerminal** – the computer terminal the librarian uses to scan bar codes and enter commands.
- **LibrarySystem** – handles the check-out and communicates with the other classes.
- **Borrower** – the person checking out the book, identified by the bar code on their card.
- **Book** – a book in the library with a bar code and a status (available or checked out).
- **Loan** – records which borrower has which book and the date it was checked out.
